1 INTRODUCTION

The DN5-AF Pyrheliometer is for measuring solar Direct Normal Irradiance (DNI) when aimed at the sun. The field of view is a solid angle of 5°. It exceeds the International Organization for Standardization (ISO) specifications for a Fast Response Spectrally Flat Pyrheliometer of Class A¹. The DN5-AF has a passive microvolt output. The DN5-BF is a Class B version of the DN5-AF.

2 CONSTRUCTION

The body is manufactured from marine-grade aluminium and is anodised to provide a durable, corrosion-resistant finish. All fasteners are stainless steel. The window is made from optical sapphire which is superior to optical glass in spectral bandpass and hardness. The window is flush-mounted to prevent build up of rainwater or debris.

The DN5-AF has a thin-film thermopile sensor embedded in an integrating cavity. The thin-film configuration gives extremely fast response. Embedding the thermopile in a cavity helps minimise radiant zero off-set error by shielding the thermopile receiver surface from direct exposure to the sky. The sensor unit is embedded in a thermal mass that is isolated from the instrument body. The sensor produces an analogue voltage in direct proportion to the magnitude of the incoming solar radiation and the response is corrected for temperature dependence. A separate sensor temperature output is provided on the DN5-AF so that the user can monitor instrument temperature (available option on the DN5-BF version).

The DN5-AF is hermetically sealed, with a silica gel desiccant vial to prevent internal condensation. A diopter is attached to the body so that the instrument can be accurately aimed at the sun.

Figure 1. DN5-AF Pyrheliometer

See section 7 for an internal view of the DN5-AF.

¹ ISO 9060:2018 Specification and classification of instruments for measuring hemispherical solar and direct solar radiation. ISO 9060:2018 'Class A' roughly corresponds to superseded ISO 9060:1990 'Secondary Standard'

3 INSTALLATION

3.1 MOUNTING and ALIGNMENT

For direct solar radiation measurement, select a site where the view the DN5-AF has of the sun is not obstructed between earliest sunrise and latest sunset throughout the year.

It is recommended that the DN5-AF be mounted to an automatic solar tracking system. Tracking alignment should be better than $\pm 0.5^\circ$. Take care that the DN5-AF alignment diopter is not obscured by the chosen tracker mount. An accessory Pyrheliometer Mount and Active Trackers (see Appendix B) are available from Middleton Solar.

Both the front diopter sight and rear diopter target have central "pinholes". When the DN5-AF is correctly aimed at the sun, direct light passing through the front pinhole will also pass through the rear pinhole, and can be seen as a bright spot on a card held behind the diopter target.

3.2 ELECTRICAL CONNECTION, DN5-AF

The DN5-AF has a shielded output cable. The cable shield can be grounded at the measurement end.

The cable cores are:

red = output +ve (typically 12 μV per W/m^2)

blue = output -ve

(yellow & green = temperature thermistor, see Appendix E)

The measurement equipment should range up to 15mV and have an input impedance of at least 10M Ω .

4 MAINTENANCE

Keep the window clean. Use only water and mild detergent to gently wash the surface. If the window is cracked or pitted it should be replaced.

The DN5-AF contains a desiccant to ensure that the interior remains dry and free from condensation. The desiccant is orange silica gel (non-toxic). The silica gel changes from orange to clear (or green) if moisture has entered the instrument.

To access the silica gel unscrew the rear dehydrator cap and withdraw the desiccant vial. Take care to correctly position the O-ring seal when refitting the dehydrator cap.

5 CALIBRATION

Each DN5-AF Pyrheliometer is individually calibrated during manufacture by outdoor comparison to a reference Pyrheliometer, according to ISO 9059². The reference Pyrheliometer is traceable to the World Radiometric Reference (WRR).

The calibrated sensitivity is inscribed on an identification label on the body of the instrument.

It is recommended that Pyrheliometer calibration be checked every two years to maintain data integrity.

Calibration can be undertaken by the User or by any recognised solar calibration facility. Middleton Solar also offers a calibration service all year round.

6 TECHNICAL SPECIFICATION

Performance Specification	ISO 9060:2018 Fast Response Spectrally Flat		DN5-BF & DN5-AF
	Class B	Class A	
Response time (to 95%) ³	< 0.5 s	< 0.5 s	0.3 s
Zero off-set a), response to 5°C/hr	± 3 W.m ⁻²	± 1 W.m ⁻²	< ± 0.2 W.m ⁻²
Zero off-set b), total response	± 4 W.m ⁻²	± 2 W.m ⁻²	< ± 1.0 W.m ⁻²
Non-stability (1 year interval)	± 1%	± 0.5%	< 0.2%
Non-linearity (100 - 1000 W.m ⁻²)	± 0.5%	± 0.2%	< ± 0.2%
Spectral error (280 to 4,000nm)	± 1%	± 0.2%	± 0.2%
Spectral selectivity (0.35 to 1.5µm) ⁴	< 3%	< 3%	< 2.5%
Temperature response (-10 to +40°C)	± 1%	± 0.5%	< ± 1% (DN5-BF) < ± 0.5% (DN5-AF)
Tilt response (@ 1000 W.m ⁻²)	± 0.5%	± 0.2%	< ± 0.2%
Additional signal processing errors	± 5 W.m ⁻²	± 5 W.m ⁻²	not applicable

General Specification

full opening angle	5.0°
slope angle	1.0°
limit angle	4.0°
irradiance	0 – 4,000 W.m ⁻²
spectral range (nominal)	200 – 5,000nm
sensitivity	10 to 15 µV/W.m ⁻²
calibration period	2 years (recommended)
achievable uncertainty (minute totals)	U ₉₅ = 1.5% (RSS of instrument, calibration, measurement)
operating temperature	-40 to +80°C
temperature output, DN5-AF	YSI 44031 thermistor (10KΩ @ 25°C)
operating humidity	0-100% RH
output impedance (typical)	7 KΩ
measurement input impedance	>10 MΩ
window material	optical sapphire, 2mm thick
construction	anodised marine-grade aluminium & stainless steel
desiccant	silica gel (orange, non-toxic), externally accessible
IP rating	sealed to IP67
output lead	6m, with connector at instrument end
net weight	0.75kg (excluding lead)
shipping size & weight	310 x 225 x 110mm, 1kg

³ This ISO 9060:2018 requirement designates a Pyrheliometer as 'fast response'

⁴ This ISO 9060:2018 requirement designates a Pyrheliometer as 'spectrally flat'

7 SPARE PARTS

Spare parts may be ordered from Middleton Solar or through an approved distributor. For your convenience the part name and number is shown in Figure 2. Please quote both when ordering. It is also important when ordering parts to include the model type (DN5-AF or DN5-BF) and serial number of the instrument, as inscribed on the identification label.

Figure 2. DN5-AF & DN5-BF Spare Parts

APPENDIX A: SENSOR TEMPERATURE vs THERMISTOR RESISTANCE
 For DN5-AF instruments fitted with sensor temperature output

YSI 44031 Thermistor (accuracy = $\pm 0.2^{\circ}\text{C}$)

APPENDIX B: ACCESSORIES

B-1 PYRHELIOMETER MOUNT (PM02)

The PM02 can accommodate one DN5-AF/BF Pyrheliometer. Thumbscrews are provided so that the Pyrheliometer can be precisely aligned. The PM02 has a mount clamp to attach to Trackers with a 1 inch or 25mm axle.

B-2 ACTIVE SOLAR TRACKER (AST-02, AST-03, AST-03T)

The AST-02 and AST-03/3T are fully automatic trackers with integrated control computer and GPS, and an Eye that locks onto the sun to give real-time active tracking that self-corrects any alignment errors.

B-3 PYRHELIOMETER HOOD (D5H)

The D5H Hood is designed to shelter the pyrheliometer window from rain and dew. The Hood mounts to the front of the DN5-B with two M4 screws. The rotational position of the Hood should be set so that it's drain hole faces the ground.
